

SHORT –LEVER ADJUSTING TECHNIQUE SESSION

Claudia Anrig, DC

August 18, 2017

Special technique session on infant adjustment – limited to 30 attendees

Dr. Anrig is excited to present this special technique session. This intimate setting will provide hands-on instruction of full-spine short-lever adjusting for the pediatric patient (including newborn) and will include examination and setups. Participants will need to bring life-size baby dolls (20" is recommended) on which to practice and model the adjustments. To allow for individual critique of execution of the adjustment, class size will be limited to the first 30 registrants.

Recommended doll for this session is: <http://www.walmart.com/ip/JC-Toys-My-Sweet-Love-20-Baby-Doll-Blue-Onesie/45467835>. The most important aspect of the doll is that it be life-size, about 20" works well, with a soft flexible body.
